Nina Bayatti
Pseudo Code for Final Project JavaScript

My final project is essentially a "Rate Your Professor" for gym instructors. Below is the pseudo code for the JavaScript on the website:

1. Search for your gym instructor's name
2. If it's not listed, create a new profile. And if it does exist, update current profile with your review.
3. There will be five inputs to review (sweat factor, energy, playlist, class difficulty, comments). The first four inputs are a ranking 1-5 ranking system. The final input is a multi-line text field.
4. Upon submitting, the review will immediately appear on the instructor's profile.
